## PROFILE SUMMARY

Hi, I am a Data Engineer with 3+ years of experience working on backend systems, analytics dashboards, and data integration in Python and Tableau. Skilled in transforming complex operational data into actionable insights, with a strong foundation in engineering principles. Passionate about applying data-driven solutions to improve reliability and performance in real-world systems like transport and infrastructure.

## WORK EXPERIENCE

### NORTHVOLT AB | DATA ENGINEER

Skellefteå, SE | Sep 2024 – Present

- Developed backend services in **Python** and **Go** to support factory operations and equipment monitoring on AWS.
- Built event-driven data pipelines with **Lambda**, **Kinesis**, and **Glue**, processing over **10 million sensor events daily**.
- Improved system visibility and issue detection by integrating **CloudWatch** metrics and custom **Grafana/Loki** dashboards, enabling faster incident response.
- Automated CI/CD deployment pipelines to reduce manual intervention and production errors.
- Collaborated with process engineers and analysts to validate data models and ensure traceability.
- Stack:** Python, Go, FastAPI, AWS (Lambda, Kinesis, Glue), Docker, Grafana, CloudWatch

### VALUECHECKER.AI | DATA ENGINEER

Stockholm, SE | Mar 2023 – Aug 2024

- Built and deployed **FastAPI**-based services on AWS for business data processing and reporting.
- Designed batch and near-real-time ETL pipelines using **Airflow**, reducing ingestion time by over **40%**.
- Created SQL-based transformations for business metrics and quality assurance reporting.
- Monitored data integrity and alerts using **CloudWatch**, **Grafana**, and logs.
- Worked closely with data analysts to understand reporting needs and structure datasets accordingly.
- Improved release workflow by containerizing apps and automating CI/CD pipelines with **GitHub Actions**.
- Stack:** Python, FastAPI, AWS (Lambda, Glue, S3), Airflow, Docker, GitHub Actions, Grafana

### GIANT GROUP | SOFTWARE ENGINEER

London, UK | Dec 2020 – Aug 2022

- Developed and maintained internal APIs using **Python**, **C#**, and **.NET Core**.
- Automated reporting workflows and implemented business logic using **T-SQL** and **stored procedures**, reducing report generation time by over **30%**.
- Improved observability by enhancing logging, structured error handling, and alerting practices across services.
- Contributed to microservices powering compliance and payroll systems used across the organization.
- Stack:** Python, C#, .NET Core, T-SQL, Stored Procedures, Power BI, Git

## SKILLS

**Languages:** Python, Go, C#, SQL (advanced), Bash

**Backend:** FastAPI, Flask, .NET Core, RESTful APIs, WebSocket, OAuth2, JWT

**Cloud Platforms:** AWS (Lambda, S3, Kinesis, Glue, Athena, EC2, DynamoDB, IAM, CloudWatch)

**DevOps:** Docker, GitHub Actions, Jenkins, Terraform (IaC), CI/CD, Git

**Data Engineering:** Airflow, Kafka, Pulsar, Redshift, SQL Server, PostgreSQL

**Monitoring:** Grafana, CloudWatch, Kibana

**Tools:** Agile, Scrum, Jira, Confluence, Postman

## EDUCATION

### MASTER'S IN DATA ENGINEERING

UPPSALA UNIVERSITY

Uppsala, SE | Aug 2022 - Jan 2025

# PROJECTS

## REAL-TIME ANALYTICS DASHBOARD

FASTAPI, OAUTH2, KAFKA, PULSAR, REDIS, DOCKER, CI/CD

Built a backend analytics platform with **FastAPI** and streaming tools like **Kafka** and **Pulsar**. Implemented secure **OAuth/JWT** authentication and API key management. Automated deployment with Docker and GitHub Actions.

## REAL-TIME MACHINE TELEMETRY PIPELINE

PYTHON, AWS LAMBDA, GLUE, S3, ATHENA, CLOUDWATCH, TERRAFORM

Developed a serverless telemetry pipeline using AWS-native tools. Used **Lambda**, **Glue**, and **Athena** for real-time data processing, with deployment handled via **Terraform**. Integrated **CloudWatch** for monitoring and alerting.

## DATA WAREHOUSING SOLUTION

PYTHON, DOCKER, POSTGRESQL, SQL SERVER

Designed and built a data warehouse integrating structured sources. Used Python for data extraction, modeling and transformation, and Docker to manage isolated environments for testing and deployment.

## CREDIT POLICY CHECKER API

PYTHON, FASTAPI, DOCKER

Created a rule-based API for credit application decisions. Emphasized secure API design, structured validation, and containerized deployment.
